

Best Management Practices

for farmers

Soil Fertility

Practices that has helped farmers to enhance fertility.

- Ploughing early (immediately after removing the crop) and re taining trash
- Growing cotton in rotations with legumes such as velvet beans, cowpeas ,sun hemp
- Application of well decomposed plant and animal manures such as compost and cow dug as basal treatment.
- Supplementing basal treatment with manure/ leaf teas either as foliar or as drench.

Trash Retention

Compost making

Sunhemp as a rotational crop

Liquid Manure

End

Thank you
